-!- FORTION: PRIABSE ACCELERATE THE FOLDING OF PROTEINS.

-!- CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLICOPEPTIDES.

-!- SUBCELLULAR LOCATION: Cytoplasmic.

-!- SIBCELLANEOUS: FKEP BINDS TO THE IMUNOSUPPRESSANT DRUG FK506 AND ALSO MEDIATES THE SENSITIVITY TO RAPAMYCIN.

-!- SIMILARITY: BELONGS TO THE FKEP-TYPE PPIASE FAMILY.

New nucleic acids encoding human PK506 binding proteins

Claim 12; Fig 4; 87pp; English.

The presure represents a mandam rave binning browner to the sequence given in AAX8614.

The polypeptide or polymuclectide may be useful in treating deficiencies or disorders of the immune system, by activating or inhibiting the proliferation, differentiation, or mobilization (chemotaxis) of immune calls. They may be useful in treating or detecting deficiencies or disorders of hematopoietic cells including the pluripotent stem calls to hematopoietic cells including the pluripotent stem calls in the pluripotent stem calls, in an effort to treat those disorders associated with a decrease in certain types of hematopoeitic cells. They can be used to modulate hemostatic or thrombolytic activity, e.g. an increase can treat blood coagulation disorders, blood platelet disorders or wounds resulting from trauma, surgery or other causes, or a decrease can treat heart attacks, strokes or scarring. They can also treat autoimmune disorders, allergic rections and conditions such as aethem (particularly allergic asthma) or other respiratory probleme, anaphylaxis, hypersensitivity to an antigenic molecule, or blood group incompatibility, organ rejection or careft versus host disease, inflammatory conditions, both chronic and acute, including inflammation associated with infection, ischemia-reperfusion injury, endotoxin lethality, arthritis, complement-mediated hyperacute rejection, near viral, bacterial, fungal and conditions, inflammatory bowel disease, or cohon's disease. present sequence represents a human FK506 binding protein 65 parasitic infections.

proteins, called parcreatic cancer antigens, given in AABS4008 to
AABS4466. The human pancreatic cancer antigens have cytostatic,
neuroprotective, nootropic, immunomodulatory, relaxant, contraceptive,
gynaecological, cardiant and antiinflammatory activities, and can be used
in gene therapy. The polynucleotide and proteins can be used for
preventing, treating, or ameliorating a medical condition or in assays
for diagnosing a pathological condition or a susceptibility to one in a
subject. Binding partners to the proteins and the activity of the
cytoteins can be identified. The pancreatic cancer antigens can be used to
detect, treat or prevent pancreatic disorders, especially cancer.
Agonists and antagonists to the antigens can be used to design nucleic
analysis, tissue identification and/or typing and a variety of forensic
and diagnostic methods. The proteins can be used to design nucleic
cand diagnostic methods. The proteins can be used to generate antibodies
which are used to puxify, detect and traget the polypeptides, including
both in vivo and in vitro diagnostic and therapeutic methods. The
reproductive, gastrointestinal, pulmonary, cardiovascular, renal or
proteins can be used to treat or prevent neural, immune system, muscular,
reproductive, gastrointestinal, pulmonary, cardiovascular, renal or
proteins can be used to treat or prevent neural, immune system, muscular,
reproductive, gastrointestinal, pulmonary, cardiovascular, renal or
proteins can be used to treat or prevent neural, immune system, muscular,
reproductive, gastrointestinal, pulmonary, cardiovascular, renal or
proteins and in the exemplification of the present invention. treating, or ameliorating a medical condition, particular pancreatic cancer, or for use in assays for diagnosing a pathological condition New nucleic acid that is a pancreatic cancer antigen for preventing AAC98773 to AAC99231 encode the human pancreatic cancer associated Claim 11; Page 1260-1261; 1379pp; English.

membrane Proteins comprising hydrophobic regions, such as secretory and me proteins, useful in research and diagnostics and having various activities e.g. immunomodulatory, antiinflammatory, chemokinetic, hemostatic, thrombolytic -

Claim 1; Page 230-232; 410pp; English.

Secretory proteins play important roles in the proliferation control, the differentiation induction, the material transport and the biophylaxis of cells. Membrane proteins have important roles as signal receptors, ion channels and transporters. The present sequence is a human protein which has at least one hydrophobic domain. This protein may be a secretory or a membrane protein. The present protein may have cytokine and cell proliferation/differentiation activity, immune stimulating or suppressing activity, haematopoisals activity, tissue growth activity, and throubly cactivity, and throubly cactivity, and throubly cactivity, and tinflammatory activity and tumour inhibition activity. The present protein could therefore be used for treatment of autoimmune disease, Alzheimer's disease, Parkinson's disease, and cancer.

This sequence represents human isomerase homologue-1 (HIH-1).

Nucleotides encoding HIH-1 were first identified in an ovarian tumour nucleotides encoding HIH-1 were first identified in an ovarian tumour constitution of the cDNA ilbrary, the cDNA encoding this sequence being a consensus. HIH-1 is also expressed in other cancerous tissues, lymph nodes, inflamed colon, and synovium. HIH-1 has chemical and structural homology with colons, and synovium. HIH-1 has chemical and structural homology with colons in the endoplasmic reticulum targetting sequence and many of the perential phosphorylation sites. FKBPS (FKSO6 binding proteins) are a consensus isomerases of Prisass) which catalyse the cis to trans isomerisation of certain proline imidic bonds in proteins. FKBPS can bind the potent immunosuppressants FKSO6 and crapamycin, inhibiting PPIAses activity and thus blocking signalling pathways in T-cells. The expression pattern of HIH-1 and its homology with FKBPGS indicate that it plays a role in cancers (e.g., laethwama, catherosclerosis). HIH proteins, and the nucleotides that encode them, may be used for the diagnosis, treatment or prevention of such diseases. HIH proteins may be used to identify agonists and antagonists of expression and/or activity, and to raise antibodies The antibodies and antagonists of asportosis, and the antibodies may also be used in detection of HIH proteins and diagnosis of associated diseases. HIH nucleotides may be used in gene therapy or in the production of recombinant protein either protein and diagnosis of associated diseases. HIH nucleotides may be used in other antibodies may be used in gene therapy or in the production of recombinant protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   179

Neurotrophic factor expression-inducing agent, applicable in developing drugs for neural diseases e.g. dementia, cerebral embolism, spinal injury and peripheral nerve diseases by screening their regulatory effect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a human neurotrophic factor expression-inducting agent. The polypeptide is designated PSEC56. The PSEC56 protein is used to increase nerve growth factor providing neurite outgrowth effect, which is applicable in developing drugs for neural diseases e.g. dementia, cerebral embolism, spinal injury and peripheral nerve diseases, with use of PSEC56 as the neurotrophic factor expression-inducing agent which can be applied in a system to study induction and secretion mechanism of neurotrophic factor.

(FREBES). It is a split the action of the sequence given in ARR86145. The polypeptide or polynucleotide may be useful in treating deficiencies or disorders of the immune system, by activating or inhibiting the proliferation, differentiation, or mobilization (chemotaxis) of immune cells. They may be useful in treating or detecting deficiencies or disorders of hematopoietic cells, to increase differentiation and proliferation of hematopoietic cells including the pluripotent stem cells in an effort to treat those disorders associated with a decrease in certain types of hematopoeitic cells. They can be used to modulate hemostatic or thrombolytic activity, e.g. an increase can treat blood coagulation disorders, blood platelet disorders or wounds resulting from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; FK506 binding protein; FKBP65; immune system disorder; immune cell; hematopoietic cell disorder; thrombolytic activity; blood coagulation disorder; blood platelet disorder; wound; heart attack; stroke; scarring; autoimmune disorder; allergic reaction; asthma; respiratory problem; anaphylaxis; hypersensitivity; blood group incompatibility; organ rejection; graft versus host disease; inflammatory condition; inschmana-reperfusion injury; endocoxin lethality; arthritis; complement-mediated hyperacute rejection; nephritis; lung injury; inflammatory bowel disease; Crohn's disease; infection.

```
polypeptide (II) sequences (II) is useful as hybridisation probes, polypeptide (II) reacuted for primers, oligomers, and for chromosome polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase chain reaction (PCR) primers, oligomers, and for chromosome can demempain, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (II) is useful in gene therapy techniques corrector normal activity of (II) or to treat disease states involving (II) is useful in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical and polymeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human call agreemence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO cut fire, wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GEEGRGN-IPGSAVLVFDIHVIDFHNPSDSISITSHYKPPD-CSVLSKKGDYLKYHYNAS 205

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, acg. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity, tissue growth factor activity is unapposed activininhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular; vulnerary; gastrointestinal; nephrotropic; antiinfective; gynaecological; antibacterial; gene therapy; neural; immune; reproductive; renal; gastrointestinal; pulmonary; cardiovascular; proliferative disorder; wound; infectious disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; prostate cancer; prostate cancer antigen; detection; diagnosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  189 SVLSKKGDYLKYHYNASLLDGTLLDSTWNLGKTYNIVLGSGQVVLGMDMGLREMCVGEKR 248

The present sequence represents human FKSO6 binding protein 65 (FKBP65).

The polypeptide or polymucleotide may be useful in treating deficiencies or disorders of the immune system, by activating or inhibiting the proliferation, differentiation, or mobilization (chemotaxis) of immune cells. They may be useful in treating or detecting deficiencies or disorders of hematopoietic cells, to increase differentiation and proliferation of hematopoietic cells, increase differentiation and proliferation of hematopoietic cells including the pluripotent stem cells, in an effort to treat those disorders associated with a decrease con creation types of hematopoietic cells. They can be used to modulate hemostatic or thrombolytic activity, e.g. an increase can treat blood coagulation disorders, blood platelet disorders or wounds resulting from trauma, surgery or other causes, or a decrease can treat heart attacks, strokes or scarring. They can also treat autoimmune disorders, allergic reactions and conditions such as asthma (particularly allergic asthma) or other respiratory problems, anaphylaxis, hypersensitivity to an antigenic molecule, or blood group incompatibility, organ rejection or graft versus conference, or blood group incompatibility, organ rejection or graft versus conference inflammation associated with infection, ischemia-reperfusion injury, inflammatory conditions, both chronic and acute, including inflammatics, cytokine or chemokine induced lung injury, inflammatory bowel disease, or Crohn's disease. They can also be used to treat viral, type compaterial, fungal and parasitic infections.

Isolated nucleic acid molecules encoding novel ovarian polypeptides, useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian cancer), immune disorders, cardiovascular disorders and neurological diseases

treating, prognosing or preventing various ovary and/or breast-related disorders. Such conditions include ovarian cancer and breast cancer, and metastatic tumours of ovarian or breast origin, reproductive system clisorders (e.g., infertility, disorders of pregnancy, anovulation, polycystic ovary syndrome, ovarian or oysts, and dysmenorrhoes), endocrine disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and vaginitis), immune disorders (e.g., congenital and acquired immunodeficiencies autoimmune oophoritis, systemic lupus erythematosus), congenital and acquired immunodeficiencies autoimmune oophoritis, gastemic lupus erythematosus, respiratory disorders, neurological disorders, gastrointestinal disorders and urinary system disorders. Ovarian antigen polypeptides and polymucleotides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polymucleotides may continue therapy, chromosome mapping, in the dentification of individuals and in forensic analysis, and the polymucletides may be used as food additives or to prepare antibodies useful in disease diagnosis, drug targeting and phenotyping. The present sequence represents a human ovarian antigen of the invention. The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP41228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also encompasses polypeptides 90% identical and polynucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen polynucleotides, antibodies against human ovarian antigens of ovarian antigens of ovarian antigens of ovarian antigens.

The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of
Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         64 DFVRYHYNGTFLDGTLFDSSHNRMKTYDTYVGIGWLIFGMDGKGLLGMCVGEKRITIFPFF 123

The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical furus. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 6, Application US/08803899
Patent No. 531224
GENERAL INFORMATION:
APPLICANT: DONABOE, PATRICIA K.
APPLICANT: WANG, TONGWEN
TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR ENHANCING
TITLE OF INVENTION: CELLULAR RESPONSE TO TGF-BETA LIGANDS
NUMBER OF SEQUENCES: 26
CORRESPONDENCE ADDRESS:
ADDRESSEE: STERNE, KESSLER, GOLDSTEIN & FOX P.L.L.C
STREET: 1100 NEW YORK AVENUE, SUITE 600
TITLE OF INVENTION: PROTEIN AND MOLECULAR CLONING OF FITLE OF INVENTION: CDNA NUMBER OF SEQUENCES: 32
CORRESPONDENCE ADDRESS:
ADDRESSEE: Hamilton, Brook, Smith and Reynolds, P.C. STREET: Two Militia Drive
                                                                                                                                                                                                 MEDIUM TYPE: Floppy disk
